

PROJECT 3 : ADVANCED JAVA PROJECT

- Project Name : DollarsBankJavaScriptAppV1
- Domain : Banking
- Application Type : Web App (Servlets/JSP)
- Architecture Used : MVC Architecture
- User Interface : Graphical User Interface

PROJECT 3 : Advanced JAVA PROJECT

Objectives

- 1. Use layered architecture (abstracted files under SOLID principles) to make an MVC banking application.
 2. ***This a JSP project that expands, reworks the previous 2 projects so that the Front End is powered by JSP.
 3. *** As always - use the Project Explorer Screenshots as a GUIDE to help brainstorm ideas, but you don't have to exactly implement in each file in the structure shown.
 4. Create a user login system (no DB necessary, use in program memory).
 5. Once logged in, have a user menu display in console.
 6. Allow user to make :
 - a. Deposit
 - b. Withdrawl
 - c. Funds Transfer
 - d. 5 recent transaction history
 - e. Display customer information
 - f. Sign out
 7. Apply business logic to handle illegal operations in :
 - a. login system
 - b. Transactions (withdrawls /deposits, etc.)
 8. See sample screenshots (next page).
 9. After 1 week attempt - sample code will be released.
